an illumination apparatus comprising a flexible liquid light guide coupled to the image acquisition system for highlighting the plurality of manipulated cells, wherein the flexible liquid light guide comprises a flexible hose-type sleeve wherein said sleeve is filled with a liquid and wherein said liquid light guide is capable of vibrationally isolating the illumination apparatus from the image acquisition system; and

a database system coupled to the image acquisition system, the database system being adapted to be populated with information of the image of the plurality of manipulated cells;

wherein the information comprises a plurality of descriptors, each of the descriptors comprising a plurality of features, each of the features corresponding to a cellular or subcellular component from the plurality of manipulated cells.

Please add the following claims:

1

45. The system of claim 16, wherein the liquid is an aqueous solution containing chloride or phosphate.

- 46. The system of claim 16, wherein the liquid light guide further comprises a thin layer on the inside of the sleeve.
- 47. The system of claim 46, wherein said layer comprises tetrafluoroethylene and mexafluoropropylene.
- 48. The system of claim 46, wherein said layer comprises tetrafluoroethylene and perfluoromethyl vinyl ether.
- 49. The system of claim 46, wherein said layer comprises tetrafluoroethylene and perfluoropropyl vinyl ether.
- 50. The system of claim 16, wherein the liquid light guide has less than about 30% transmission loss.
- 51. The system of claim 16 wherein the image acquisition system comprises a magnification of at least 1X or greater to capture the image of the site.

- 52. The system of claim 16 further comprising a stage comprising a device for moving the cells.
- 53. The system of claim 16 further comprising a computing device connected between the database system and the image acquisition system.
- 54. The system of claim 16 wherein the database system is selected from an objected oriented database, a relational database and a mixed database.
- 55. The system of claim 16, further comprising a filter wheel having a plurality of filters, each filtering for a different color.
- 56. The system of claim 16, further comprising software that controls operation of the image acquisition system.
- 65

57. The system of claim 16, further comprising software for creating and sequentially naming files of the information.
